

Inspect Element allows you to see the code behind any site on the web.

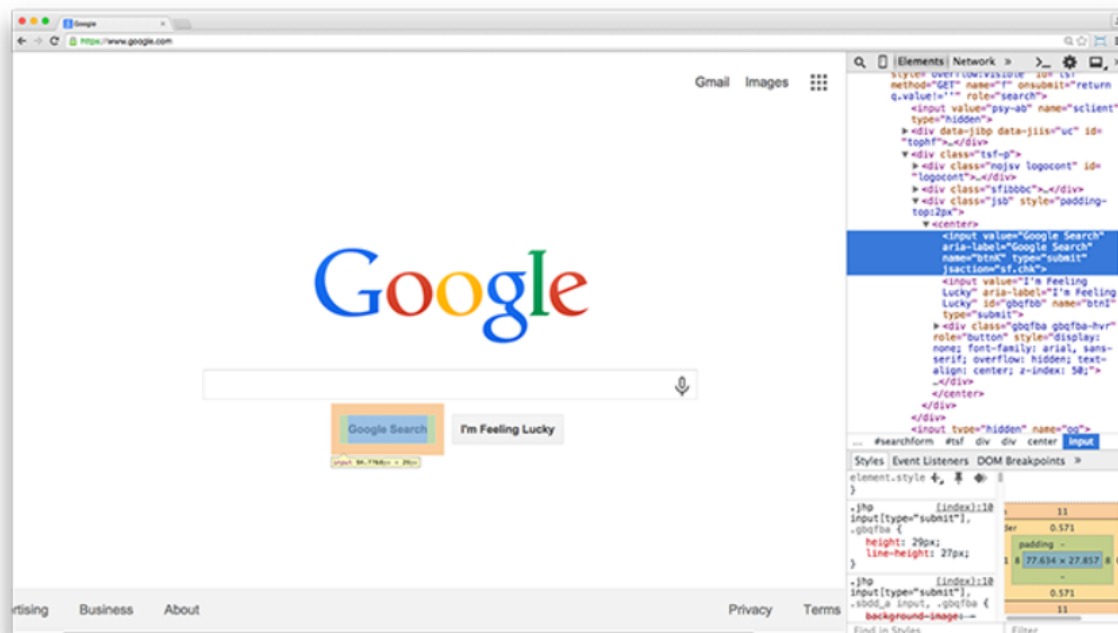

To access this amazing feature, just right-click (or press **CTRL** + click) anywhere on a web page and select Inspect Element.

Doing so will open a window that exposes the actual code making up that website.

For example, if we applied Inspect Element to the Google Search button, we can see the actual code that's used to create that button highlighted in our Inspect Element window.

You can even alter the code show in the Inspect Element to see how certain changes are rendered in the browser

For example, we changed the code for the “Google Search” button in our Inspect Element window to say “Web Development Rocks!” and our webpage has now changed to match:
